

RING SIZER

 Cut along the dotted line

FOLLOW THE STEPS BELOW TO DETERMINE YOUR RING SIZE

1. Print this page. NOTE: When you print this page, make sure that you deselect "fit to page" in the printer command window. This page needs to be the actual size when printed.
2. Once printed, cut out the ring sizer to the left along the dotted line running around the outside.
3. Next, cut a slit along the dotted line just below the "CUT A SLIT HERE" text. NOTE: Make sure to only make a slit, do not cut all the way across the width of the sizer.
4. Roll the sizer into a circle and insert the smaller end through the slit (make sure that the numbers are on the outside).
5. Place the sizer around your finger and pull tight.
6. Read the number that displays on the scale closest to the slot to determine your ring size.
